

PRIVATE CLOUD STARTER SOLUTION

Force 3 offers a **Private Cloud Starter Solution** that is designed to help agencies take their first step towards the cloud in a controlled, secure environment. Transitioning to a private cloud also helps achieve mandated requirements in a risk-free way. Our Private Cloud Starter Solution combines the following technologies and services:

- Private cloud software, built on container technologies
- Computer hardware
- Installation and configuration services

MOVING FROM PRIVATE TO PUBLIC CLOUD

When your applications have taken their journey to the private cloud — whether they have been migrated with no changes, updated, rebuilt, or replaced — your agency can now confidently take the final step into the public, multi-cloud environment. Force 3 has strategic partnerships with all of the leading public cloud providers. We also have a team of dedicated engineers to help move all of your applications from your private cloud to any public cloud provider efficiently, including moving your applications to multiple service providers.

ABOUT FORCE 3

Force 3 is *the* Network Security Company. We provide secure IT solutions and services for clients who demand value and reliability. Together with our parent company, Sirius Computer Solutions, we offer a wide range of solutions and services backed by expert engineers and strategic partnerships.

CLOUD MIGRATION METHODOLOGY

Force 3's approach to cloud migration follows a methodology that enables agencies to make the gradual transition to the cloud, whether you choose to go the private route or decide you want to move right to the public cloud. With the **Cloud Migration Methodology** we put security first and always safeguard your journey, ensuring efficient transition without disruptions.

Assessment

We start by taking a look under the hood. Force 3 assesses all of your applications' code to determine which ones are good targets for cloud migration.

Prioritization

Next, we prioritize your apps for migration based on your agency's needs. We determine which applications can be easily migrated and which will require modifications.

Journey Roadmap

We then develop a cloud migration roadmap for all of your assets based on the lifecycle of each application. Two applications could take two very different paths to the cloud environment. Our Journey Roadmap shows how all components of your applications will migrate to the cloud.

Prepare

With that roadmap in hand, we begin preparing and optimizing your applications to run in the cloud. You determine whether immediate migration can begin or if modernizing legacy applications is more important.

Build

Based on our initial assessment, we can begin rebuilding or replacing legacy applications that cannot be migrated to the cloud.

Migrate

Once your applications and workloads are ready, we begin migrating them to your cloud environment.
