# Force 3 Security Stack

Whether it's **access control**, **vulnerability management** or **security event management**, you invest in security technologies because they offer a result you need. But a good defense strategy involves more than a single solution: It requires a comprehensive, well-integrated security stack, with each solution working in tandem with the next to help you achieve full visibility, regulatory compliance and the best possible use of your resources and manpower.

65%* of organizations use between 6 and 50+ security products. Integrating those solutions is critical to a solid security strategy.

*Cisco Annual Cyber Security Report 2017

## THE PROBLEM

Even the best security solutions fall short when they're not properly integrated, optimized and utilized. To be fully meaningful and valuable, each individual solution—along with the data they generate and aggregate—should inform the other. Lacking that level of integration, organizations face a host of risks. Meanwhile, security teams find themselves tasked with analyzing and connecting a flood of data, all coming from disparate solutions.

## WHO WE ARE

**Force 3 is *the* Network Security Company.** We provide secure IT solutions and services for clients who demand value and reliability. Together with our parent company Sirius Computer Solutions, we offer a comprehensive range of solutions and services backed by expert engineers and strategic partnerships. From design to deployment, support and maintenance, we constantly focus on supporting our customers' missions and promoting the best possible outcomes.

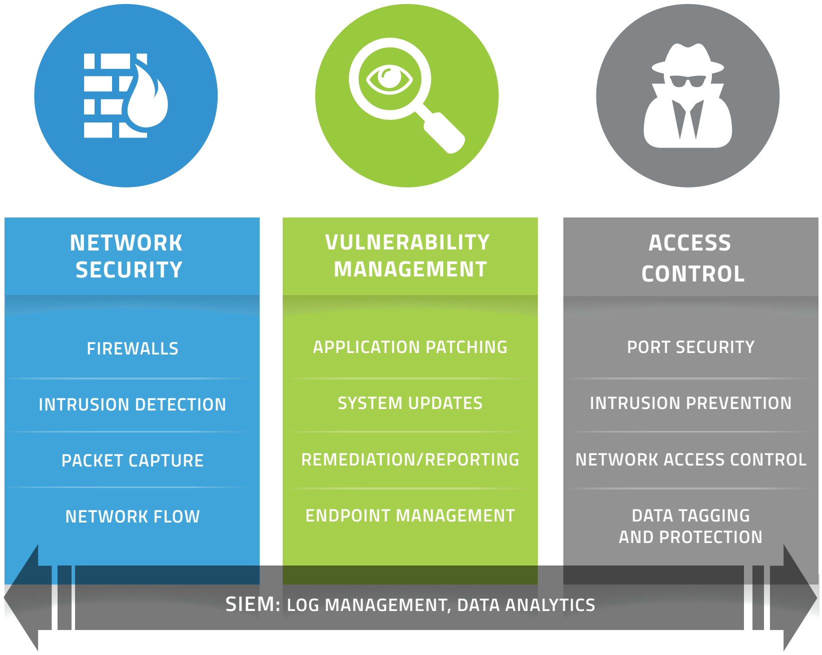
## THE SOLUTION

By combining best-of-breed technologies into unified, customized solutions, the Force 3 Security Stack helps clients meet their mission, maximize their workforce and achieve the strongest, most cohesive and holistic approach to data protection, threat detection and mitigation.

Designed around our Information Security Framework, the Force 3 Security Stack integrates four main solution categories

- Network Security
- Vulnerability Management
- Access Control
- Security Event Management

Our approach—and the resulting solution—is designed to address a range of modern threats and challenges, including: insider threat, C2C and TTD/TTR.



NETWORK SECURITY
FIREWALLS
INTRUSION DETECTION
PACKET CAPTURE
NETWORK FLOW

VULNERABILITY MANAGEMENT
APPLICATION PATCHING
SYSTEM UPDATES
REMEDIATION/REPORTING
ENDPOINT MANAGEMENT

ACCESS CONTROL
PORT SECURITY
INTRUSION PREVENTION
NETWORK ACCESS CONTROL
DATA TAGGING AND PROTECTION

SIEM: LOG MANAGEMENT, DATA ANALYTICS

### Insider Threat

Preventing or stopping internal misuse or direct theft of sensitive data requires a solution that combines disparate technologies and offers a layered approach for comparing standard network traffic to live traffic and for detecting lateral movement from external malware within your network. Our full-stack security approach allows organizations to detect, track and stop insider threats, whether from employees, contractors or malicious actors masquerading as one or the other.

### Comply to Connect

A government-focused initiative developed to safeguard federal IT systems, Comply to Connect (C2C) checks the status and security of endpoints (i.e., laptops, desktops, tablets, phones, etc.) before letting them connect to a secure network. The Force 3 Security Stack simplifies C2C compliance, allowing you to not only better assess your endpoint posture, but also to automatically remediate potential threats before they join your network.

### TTD/TTR

You want a solution that allows your organization to detect and remediate threats before they escalate. By providing a unified, automated view of various security data sources, the Force 3 Security Stack decreases both time to detection (TTD) and time to remediation (TTR), allowing you to find and respond to threats before evolve into disaster.
